SUMMARY

I have been working as a Cloud Engineer since May 2024, gaining hands-on experience with AWS services and Linux systems. My work includes deploying applications on EC2 using Jenkins CI/CD pipelines, containerizing with Docker, and managing IAM roles and VPC networking. I also focus on automation, version control with Git, and monitoring applications with CloudWatch.

WORK EXPERIENCE

Cloud & DevOps Engineer

May 2024 – Continue (Freelancing)

Jyotsna Tech Digital Ventures

- Deployed and maintained applications on AWS EC2 with automated builds and deployments using Jenkins CI/CD pipelines, ensuring smooth and reliable availability.
- Configured IAM users, roles, and policies for secure access control, managed Linux servers for application hosting, and used AWS CloudWatch for monitoring and troubleshooting.
- Worked with VPC networking, security groups, and load balancers to provide high availability and secure connectivity.

Web Infrastructure Manager

July 2021 – March 2024 (Full Time)

Anemone Digital World Pvt. Ltd.

- Maintained web infrastructure by managing C-Panel and DNS records, ensuring continuous and efficient online presence.
- Provided expert technical support and maintenance for web hosting environments, including C-Panel and DNS management .
- Conducted in-depth market analysis to identify and evaluate potential high-demand domain names for auction.
